### ***Mettler AT 200 Electronic Balance Scale 205.0000g***

Mettler-Toledo AT200 Electronic Analytical Balance with Fully Automatic Calibration Technology (FACT) and motorized (or manual) movement of glass doors.

- Capacity: 205g
- Readability: 0.1mg
- Repeatability: for full load, 0.07mg mg and for 0-50g range, 0.04mg, linearity: +- 0.15mg.

Has full range tare. Features 10 selectable weighing units: g, mg, oz, ct, dwt, GN, ozt, etc., piece counting and weighing in percent. 2 of the weighing units may be selected for prompt switching between them. Equipped with RS232 Data Interface. Features under balance weighing.

At any time, FACT detects automatically when the balance exceeds the permitted tolerance range and calibrates the balance utilizing 2 internal weights. Except of usual internal calibration, the FACT fulfills linearity self-calibration.

In addition to the FACT, the balance has menu operated calibrations: motorized internal calibration with linearization by the built in weights and external calibration by 200g weight. Balance operating menu allows to adapt the balance to weighing conditions, select calibration function, weighing process adapter, repeatability, auto zero correction, primary and alternative weighing units and interface output parameters.

Balance dimensions (W x L x H), mm: 241 x 434 x 289. Effective height above the pan: 240mm. Weighing pan sizes: 80 x 80 mm. Balance weight: 9.3 kg.
