DGU-20A3/DGU-20A5

Shimadzu offers two choices for online degassers:

- DGU-20A3 (3 channel)
- DGU-20A5 (5 channel)

Removing dissolved gases in mobile phases is an important step for ensuring proper function of pump check valves, and to prevent outgassing in the detector flow cell. The LC-20A series degassers feature extremely efficient degassing in a low-volume, compact design. The degassers are powered by the LC-20A series pumps, and the pump control panel can display the degasser vacuum level.

Features

- <400 uL internal volume
- Plugs into LC-20A series pump for power and control
- New material (Teflon AF) allows high gas permeability
- Peak efficiency in 3 minutes
- Additional channel provided for autosampler rinse solution
- External power supply available for non-LC20A systems
